Angularv1

This project was generated with Angular CLI version 16.2.8.

Development server

Run `ng serve` for a dev server. Navigate to `http://localhost:4200/`. The application will automatically reload if you change any of the source files.

Build

Run `ng build` to build the project. The build artifacts will be stored in the `dist/` directory.

API Server

The app fetches data from `https://api.github.com`.

Application Architecture

The app displays the search results of the GitHub users from the github api with the avatar image and Name

The app also shows the search history of the last recent searches which can be cleared

The app uses localstorage as cache to avoid cached calls.

The Working version of the application is deployed on https://aakash-pawan-angular.netlify.app/

For fetching data, The app uses `http.service`

The app contains `dashboard, home, history and user components`

The user component has a model `( avatar_url : string , login : string )`

This user component is being reused on home and history components
